

User facing commands for ModBot.io

This help guide is a list of all commands a user of our bot can access using a text command.

\$mute {@user} {duration in minutes}, once command is passed the discord member targeted cannot send messages in any text channel and cannot join any voice channel, until the mute expires.

\$unmute {@user}, once command is passed the discord member targeted will be given permission to send messages in text channels and allowed to join voice channels.

\$tempBan {@user} {duration in days}, once command is passed the discord member targeted cannot view any channels in the server, until the temporary ban expires.

\$unTempBan {@user}, once command is passed the discord member targeted will be given permission to view all channels.

\$addWord {at least 1 word, or more separated by space}, once the command is passed the bot will add all words in the message separated by space into the black list.

\$removeWord {at least 1 word, or more separated by space}, once the command is passed the bot will remove all words in the message separated by space into the black list.

\$addStrike {@user} {# of Strikes}, once this command is passed the bot will add the specified number of strikes to the user targeted and update the stored server data for strikes.

\$removeStrike {@user} {# of Strikes}, once this command is passed the bot will remove the specified number of strikes to the user targeted and update the stored server data for strikes.

\$getStrikes {@user}, once this command is passed the bot will send a message to the admin containing the number of strikes that the targeted user has.

\$getBlacklist {@user}, once this command is passed the bot will send a message to the admin containing the entire blacklist of words for the server.

\$addRole {@user} {@roleName}, once this command is passed the bot will give the targeted user the specified role.

\$takeRole {@user} {@roleName}, once this command is passed the bot will take the specified role from the targeted user.

\$roleInfo {@roleName}, once this command is passed the bot will send a message of the permissions the specified role has.

\$makeRole {name}, once this command is passed the bot will create a role with the specified name.

\$GRP(Give Role Permissions) {@roleName}, once this command is passed the bot will parse through all permissions and have the user respond true or false for serverwide permissions.

\$createMemberCount, once this command is passed the bot will create a private voice channel that cannot be connected to, but the name will be "Members: " and a count of all members in the server.

\$createChannel {type (t or v)} {name} {category (optional)}, once this command is passed the bot will make either a text or voice channel with the passed name based on the type parameter, it will then place it into the category specified if given.

\$makeCategory {name}, once this command is passed the bot will create an empty category with the given name.

\$removeTextC {#channel}, once this command is passed the bot will search for a text channel with this name and then remove it

\$removeVoiceC {#channel}, once this command is passed the bot will search for a voice channel with this name and then remove it

\$moveTextC {#channel} {#category}, once this command is passed the bot will search for a text channel with this name and then move it to the specified category.

\$moveVoiceC {#channel} {#category}, once this command is passed the bot will search for a voice channel with this name and then move it to the specified category.

\$limitVoiceChannel {#channel} {limit}, once this command is passed the bot will search for a voice channel with the name and limit the possible joinees to the limit number.

\$TChannelEditUserPerms {@user} {#channel}, once this command is passed the bot will present all possible user permissions within a text channel and you will respond true or false to toggle permissions for the specific channel.

\$TChannelEditRolePerms {@role} {#channel}, once this command is passed the bot will present all possible role permissions within a text channel and you will respond true or false to toggle permissions for the specific channel.

\$VChannelEditUserPerms {@user} {#channel}, once this command is passed the bot will present all possible user permissions within a voice channel and you will respond true or false to toggle permissions for the specific channel.

\$VChannelEditRolePerms {@role} {#channel}, once this command is passed the bot will present all possible role permissions within a voice channel and you will respond true or false to toggle permissions for the specific channel.
